MOHAMMED SATHAAM A

CI/CD Automation Engineer | DevOps & QE Specialist | BFSI Domain

Chennai | +91-7708429039 | sathaam1999@icloud.com | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

CI/CD Automation Engineer with 4+ years of experience delivering scalable deployment pipelines and QE automation frameworks for Lloyds Banking Group plc (UK) via Tata Consultancy Services. Proven expertise in Jenkins and Harness CI/CD, Playwright test automation, AWS cloud services, and BFSI-compliant DevOps practices. Led end-to-end migration of OpenShift Container Platform (OCP) pipelines from Jenkins to Harness, and architected a Playwright framework integrated with Jenkins/Harness Continuous Testing. Adept at collaborating with global client teams to drive release automation, quality gates, and operational reliability. AZ-104 certified. Passionate about continuous delivery, automation, and solving complex engineering challenges.

KEY ACHIEVEMENTS

- ★ Led end-to-end migration of OpenShift Container Platform (OCP) build and deployment pipelines from Jenkins to Harness — standardized release workflows across teams and improved deployment efficiency by ~35%.
- ★ Architected a scalable Playwright QE automation framework integrated with Continuous Testing (CT) and Jenkins/Harness CI/CD — reduced manual regression cycle time from 3 days to ~4 hours for the QE team.
- ★ Sole engineer responsible for 15+ Jenkins CI/CD pipelines across Dev/Test/UAT/Prod environments for a regulated UK banking client — maintained zero major deployment failures over 12+ months.

TECHNICAL SKILLS & COMPETENCIES

Programming Language: Java

Operating Systems: Windows, Linux (RHEL / CentOS)

Scripting Languages: Shell Scripting, Groovy, HTML, CSS, JavaScript

CI/CD & Build Tools: Jenkins, Harness (CI/CD & Continuous Testing), Git, GitHub, UrbanCode Deploy, Docker, SonarQube, Nexus3, GitHub Copilot

Cloud Platforms: AWS (CodeCommit, CodePipeline, CodeBuild, CloudFormation, S3, CloudWatch, Lambda, Kinesis, Security Hub, Macie, KMS) | Microsoft Azure (AZ-104 Certified)

Container & Migration: OpenShift Container Platform (OCP), Docker — pipeline migration Jenkins → Harness

Testing & QA Tools: Playwright (framework design), Selenium, UFT, Parasoft / CALisa (Service Virtualisation), Postman

Monitoring & Ops: AWS CloudWatch, CRON scheduling, RHEL server admin, log management (Kinesis → S3)

Version Control: Git branching strategies, GitHub workflows, CI pipeline triggers

Domain Experience: BFSI — Banking, Financial Services & Insurance (Lloyds Banking Group plc, UK)

PROFESSIONAL EXPERIENCE

System Engineer — DevOps & CI/CD Automation Engineer · Tata Consultancy Services (TCS)

Oct 2022 – Present

Client: Lloyds Banking Group plc, UK

- Executed end-to-end migration of OpenShift Container Platform (OCP) build and deployment pipelines from Jenkins to Harness — standardizing release workflows, reducing manual handoffs, and improving deployment efficiency across multiple delivery teams.
- Architected and deployed a scalable QE automation framework using Playwright, integrating it with Jenkins and Harness Continuous Testing (CT) pipelines and Jenkins CI/CD to enforce real-time quality gates and rapid feedback loops; reduced regression cycles from 3 days to ~4 hours.

- Designed, developed, and maintained 15+ Jenkins CI/CD pipelines across Dev/Test/UAT/Prod environments; integrated SonarQube for code quality gates and Nexus3 for artifact management — ensuring release stability for a regulated UK banking client.
- Set up AWS CloudWatch monitoring and logging solutions to ensure high availability, performance optimization, and proactive issue resolution across production environments.
- Authored AWS CloudFormation templates to provision and manage AWS infrastructure in a declarative, repeatable manner — enabling reproducibility and scalability across environments.
- Managed AWS S3 bucket sharing with third-party vendors including KMS encryption; fetched and processed logs via Kinesis and CloudWatch, transforming unstructured logs to structured format before storing in S3.
- Responded to AWS Security Hub findings and Macie alerts — assessed failed compliance checks, applied remediation, and maintained security posture for the banking cloud environment.
- Used AWS service APIs (S3, CloudWatch, Lambda) to build serverless application components supporting pipeline automation and event-driven processing.
- Created service virtualization stubs (mock APIs) using Parasoft/CALisa to decouple service dependencies and enable parallel testing; validated APIs using Postman throughout the SDLC.
- Wrote and maintained Shell and Groovy scripts with CRON scheduling for server-side automation — patch processing, log rotation, backup validation, and health checks across RHEL environments.
- Maintained Git branching workflows for version control; performed code pushes, pulls, cloning, and template modifications to trigger CI pipelines across teams.
- Conducted POCs on quality engineering tools (UFT, Parasoft) to evaluate and expand the automation toolchain; leveraged GitHub Copilot to accelerate script development and code reviews.
- Collaborated directly with UK/US client stakeholders and cross-functional teams to define deployment standards, resolve complex pipeline incidents, and drive continuous improvement of the delivery process.

EDUCATION

Master of Computer Applications (MCA)

Vellore Institute of Technology · 2020 – 2022 · CGPA: 8.94

Bachelor of Computer Applications (BCA)

Vellore Institute of Technology · 2017 – 2020 · CGPA: 8.59

CERTIFICATIONS

- **Certified Partner Specialist - Gemini Enterprise Deployment** — Google Cloud
- **Harness Certified Continuous Integration Developer** — Harness Inc
- **Harness Certified Continuous Delivery & GitOps Developer** — Harness Inc
- **Azure Administrator (AZ-104)** — Microsoft Azure
- **PEGA Certified Senior System Architect 8.6 (CSSA)** — Pegasystems
- **PEGA Certified System Architect 8.6 (CSA)** — Pegasystems
- **Java Certification** — Coding Ninjas & HackerRank
- **MySQL & C Programming** — Guvi Geek Network, IITM Research Park
